Hospitals and healthcare workers are under pressure, underscoring the need for higher productivity, better electronic data, and increased protection, and Inma deeply understand these challenges that are facing healthcare workers today.

Building Smart Healthcare Ecosystems

Inma is a leading technology solutions provider to the healthcare sector in Saudi Arabia.

Established in 1982, the Company has a rich history delivering reliable, integrated technology, and service solutions to the Kingdom's public and private sector and today is leveraging this experience and expertise to solve problems and explore opportunities in the dynamic healthcare space.

Headquartered in Riyadh, with a branch in Khobar, Inma provides comprehensive technology solutions to empower healthcare workers via a workforce of Information Technology experts together with its global partnership network.

Inma's comprehensive product and service offering includes providing a thorough analysis of the healthcare facility's operating processes and the provision of a solution to address its specific needs, as well as the implementation, employee training, system monitoring, and after sales support and ongoing maintenance.

From Asset Management Real Time Location Systems (RTLS), advanced RFID (Radio Frequency Identification) Infant Protection Systems (IPS), leading solutions in Electronic Patient Protection Systems, Staff Protection Solutions , Automated Radiofrequency Identification (RFID) Systems for monitoring Hand Hygiene, Patient Tracking Systems designed to improve the "flow" of patients through the hospital setting, to technologically advanced Nurse Call Systems, Inma's advanced solutions will empower its clients so that they can focus on what matters most; the health and safety of the patient.

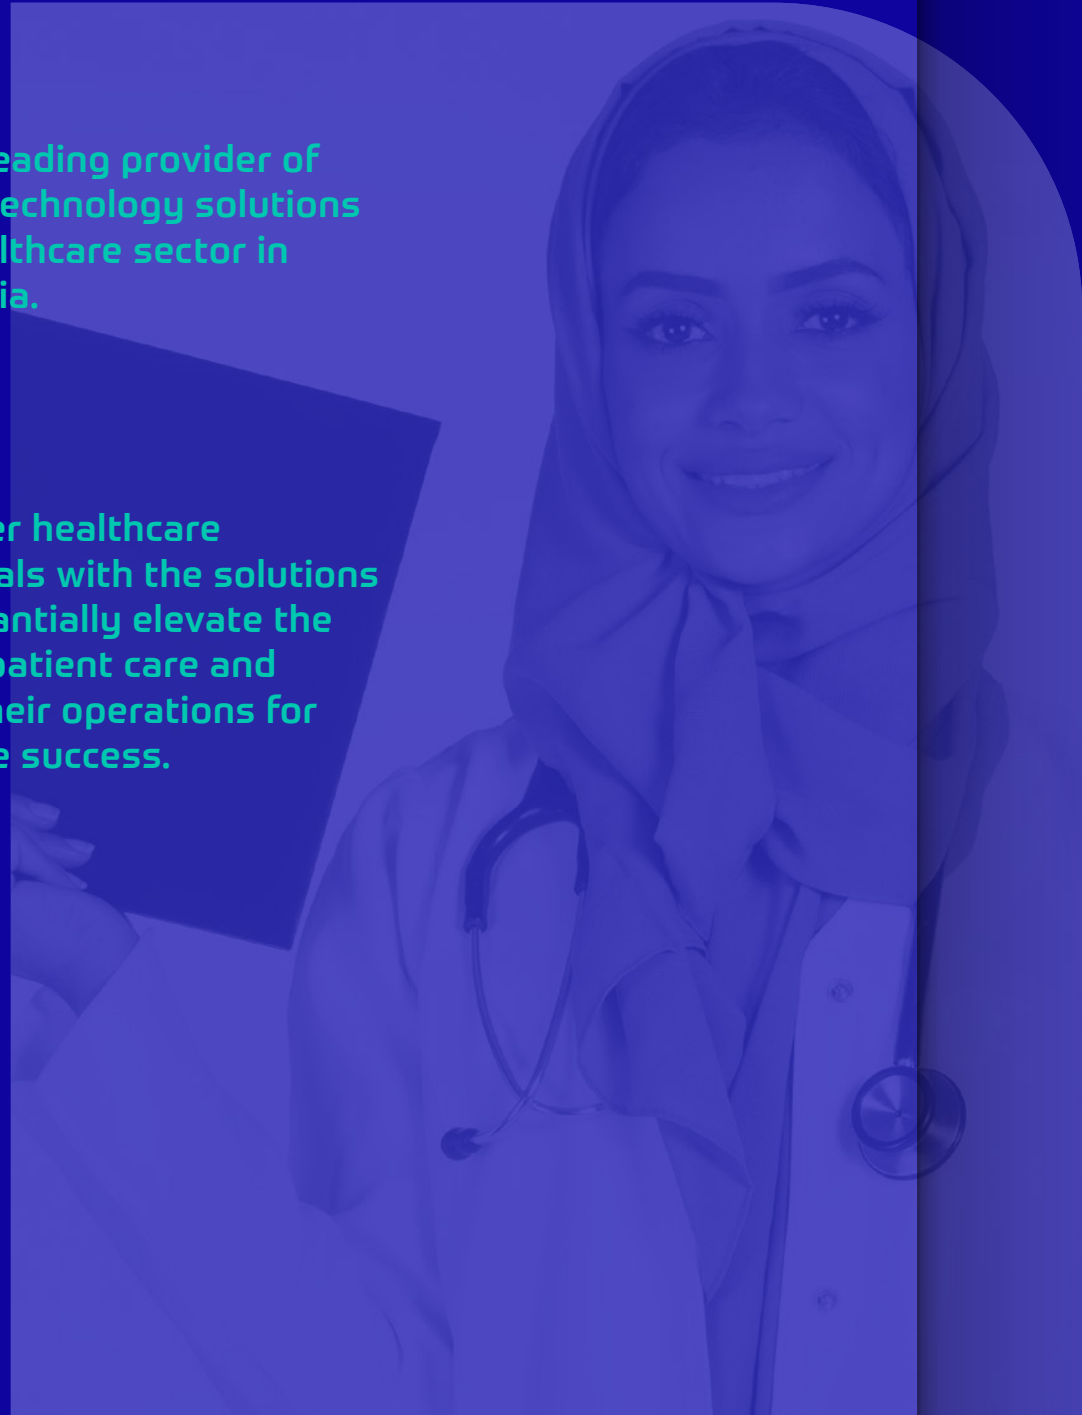

The state-of-the-art integrated technologies increase data accessibility, enhance administrative decision making and operational efficiencies, and greatly improve communication, a vital factor in the effective operations of a healthcare facility. Many specialists believe that effective communications increase patient and caregiver satisfaction and safety and creates a better overall hospital environment. Together, with its partners, Inma is transforming Saudi Arabia's healthcare sector by digitizing one facility at a time to support the delivery of world class standards of healthcare for all Saudis and residents, now and in the future.

Vision

To be the leading provider of advanced technology solutions for the healthcare sector in Saudi Arabia.

Mission

To empower healthcare professionals with the solutions that substantially elevate the quality of patient care and optimize their operations for sustainable success.

Values

In our quest for success, we remain customer-driven in order to build a long-lasting partnership based on the principles of mutual success, Passion, Excellence, Respect, Openness, Reliability, Fun and Meaning. We PERFORM to create value every day; and promise each year to be better than the year before.

Chairman's Welcome

Driving Healthcare Change Building Smart Healthcare Ecosystems

The world's public and private health care systems have long faced challenges. Rising health care costs. Changing consumer expectations. New market entrants. Increasing patient numbers versus decreasing numbers of doctors and nurses. These challenges are real, complex and ever changing, and have a huge impact on the health of the global community.

In Saudi Arabia, the Saudi Vision 2030 and National Transformation Program 2020 (NTP) has acknowledged the importance of progressive healthcare for Saudis and is focusing on addressing these challenges. A key area is to improve the quality of healthcare services and facilities across the Kingdom of Saudi Arabia, and an important facet of this is the digitization of the sector. This is where Inma comes in.

Inma strives to empower Doctors, Nurses and Healthcare Administrators with technology enabled solutions which will help them improve their productivity and enhance the services they provide on a daily basis.

RAMI ALTURKI

Chairman of the Board of Inma

Managing Director's Message

Inma provides a turnkey solution towards digitizing healthcare facilities.

We assess, design, install, train employees, monitor and maintain advanced integrated technology systems that are designed to solve the greatest challenges faced by Doctors, Nurses and Healthcare Administrators on a daily basis.

I am pleased that today, health care executives in Saudi Arabia appreciate the need to invest in advanced digital technologies in order to build a smart health ecosystem whereby duplicate entries are eliminated, systems are linked, human error are reduced, and most importantly, caregivers have access to information they need when they need it so that they can focus on what matters most – their patient.

Healthcare Administrators are also now realizing the benefits of being empowered with access to intelligent digital insights. It helps them to manage inventory, assets, manage time recruit and retain caregivers, and overall, drive sustainable operational efficiency.

As more Saudi Healthcare players embrace digitization as the way forward, Inma is joining hands in an ever-growing network that together is transforming the Kingdom of Saudi Arabia's healthcare system; optimizing how patients access care and stimulating the economy in the process. Together, we are creating a healthier future for all!

ENG. BADER ALSHATHRY

Managing Director of Inma

What We Do

We Solve Problems

Inma delivers technology solutions that enhance the quality of patient care whilst improving hospital safety, security and operational effectiveness.

Inma's solutions digitize and streamline processes to reduce human error and simply take healthcare to the Digital Age. Inma will perform a thorough analysis of the facilities' processes and systems and identify operational gaps in order to deliver an integrated operating model.

Infant Protection Systems (IPS)

Delivering Peace of Mind

Inma delivers proven technology designed to safeguard the infant population in healthcare facilities and promote a safe and secure environment for mothers and their new-borns. The state-of-the-art RFID (Radio Frequency Identification) based Infant Protection System (IPS), which supports the correct matching of mothers with infants and offers 7/24 'abduction alert', delivers peace of mind for new mums and nursing staff. The IPS simultaneously heightens security whilst reducing the legal and reputational threat that one accident would cause to the hospital and its brand.

Patient Protection and Elopement Management

New Generation Patient Monitoring Providing Patient Freedom & Safety

Inma provides leading solutions in electronic patient protection systems that reduce the risk of wandering and elopement whilst providing patient freedom. The System, which automatically generates alerts, protects ambulatory patients from danger, particularly those with mental challenges and neurological disorders, whilst eliminating the need for manual monitoring, in order to create a more effective and efficient hospital.

Staff Protection

Protecting Healthcare's Most Important Assets

The hospital setting is one of the most challenging work environments and the people giving care are the organization's most important assets. Inma Staff Protection solutions ensure clinical staff safety and protection and prevent threats from escalating to dangerous events. A hospital where staff are stressed, exhausted or under attack will not operate efficiently, so an investment in healthcare staff protection is a key element towards operational effectiveness.

Asset Management

Delivering Efficiency and Care

Inma Asset Management Real Time Location Systems (RTLS) address the challenges faced by healthcare staff who need to know the exact location and condition of critical devices, such as IV pumps and other devices, immediately. With both patient volumes and patient expectations increasing, hospitals must streamline workflows, and one of the key factors to an effective workflow is asset tracking and management.

Hand Hygiene Compliance Monitoring

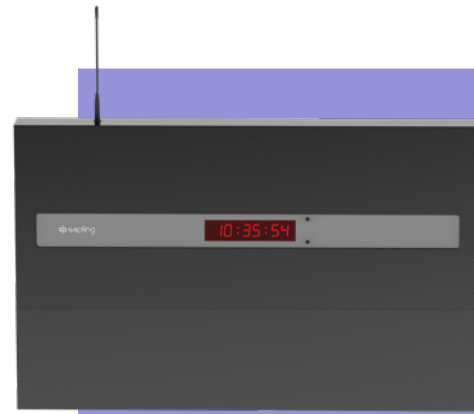

Measuring Adherence

Hand hygiene is recognized as the most important aspect of infection prevention in healthcare settings, with direct observation the most common standard monitoring method. However, in today's fast paced healthcare environment, this method is not feasible. Inma offers automated radiofrequency identification (RFID) systems for monitoring hand hygiene to reduce health care-associated infections, and infection-related expenses due to non-compliance, by improving the hand hygiene of health care workers.

Patient Tracking Systems

For a Better Healthcare Experience

Inma Patient tracking Systems provide information to improve the "flow" of patients through the hospital setting so that patients are satisfied, and the hospital operates effectively and efficiently. Tracking patients can support hospital administration in improving patient satisfaction by identifying gaps in internal processes and finding ways to improve patient services. Inma Systems supports hospitals to improve their ability to move patients through the treatment system more efficiently by providing real-time updates on lab results and other important information so that patients can move to the next step in their treatment.

Master Clock

Reliable Synchronicity

In a healthcare facility accurate time is vital. It determines medication delivery, shift changes, appointments, surgery timings and is important for reporting, insurance purposes and more. Simple, the accuracy of timing is paramount to patient safety, and a master clock, a precision clock that provides timing signals to synchronise 'slave clocks' as part of a clock network, proactively minimizes risks to keep hospital departments and healthcare staff in sync all the time.

Fire Alarm System

Designed for Complexity

Inma are experienced in designing, installing and maintaining fire alarm systems devised to meet the specific needs of the healthcare sector.

Healthcare facilities are complex and as such must have the best fire alarm system available in the market. Facilities must protect their patient and assets with a system that provides them with ample warning so that there is sufficient time to evacuate immobile patients in the event of a fire or other threat. Inma's extensive experience ensures we take into consideration proper zoning of fire alarm systems to aid the fire department in locating the origin of the fire to ensure systems have modern alerts and coded notifications in order to reduce panic. In addition to designing, installing and maintaining fire alarm systems, Inma train healthcare OH&S employees on the use of the Fire Alarm Systems in their particular facility.

Public Address & Voice Evacuation Systems

Seamless Announcements

Inma's Low Current Public Address & Voice Evacuation Systems range from simple microphone and speaker arrangements to full evacuation systems and are highly effective and low-cost methods of communicating information to a large area or group of individuals quickly.

Nurse Call Systems

Evolved Connectivity

Nurse Call Systems have evolved to become powerful tools that transform healthcare facilities. Yes, they are still the primary means of communication between patients and nursing staff, however they are so much more! Today's Nurse Call solutions are technologically advanced systems that can be fully integrated with other healthcare technologies to transform operational efficiency and the patient experience! From facilitating patient-to-staff voice communications, improving patient and staff flow, assimilation with real-time locating systems (RTLs) and integration with electronic health records and admitting, discharge and transfer, to creating a positive environment by improving the patient and caregiver relationship through effective communications; Nurse Call Systems have come a long way.

How We Work

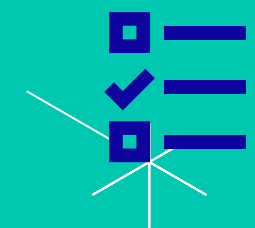

Analyze

We do a deep dive into our clients' healthcare facility. We understand the requirements and challenges and ensure the project team is aligned on the vision of the ideal future.

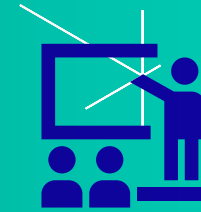

Plan

Together, with our clients and global technology partners, we create a strategic, integrated solution that empowers our clients to achieve operational excellence and complete patient and caregiver satisfaction.

Implement

We install the solution tailored to meet the specific needs of our client, ensuring the highest standards of project management and service quality.

Train

To ensure our clients are fully empowered by the technology solutions we install, we equip our client teams with the basic knowledge and skills to access its benefits through systems training.

Support

The Inma team will be available to support hospital administration long after "Go live" to ensure the digital transformation of the healthcare facility remains on track and reaches agreed milestones.

Maintain

Ensuring the optimal running of your new system over the long term is key to success. Inma's regular maintenance of the advanced integrated technology systems we install will be key to the sustainable advancement of our clients' facility.

Our Customer

Healthcare clients we have helped to empower their professional teams over the years through our advanced solutions.

Global Brands

We only partner with the best healthcare tech brands on earth.

For almost 40 years, Inma have built an international partnership network of global brands so that our clients can rest assured that they have access to the latest technological innovations available today in the global healthcare market.

Why Inma

We Understand

Inma have a deep understanding of the Saudi market gained from 40 years of experience and a concrete knowledge of hospitals and the financial and social challenges the health care sector in Saudi Arabia faces.

We Are Connected

We have a large alliance network of global technology partners and an ecosystem of sister companies in various industrial verticals.

We Are Accessible

Inma have nation-wide Coverage Via its offices in Riyadh and Khobar.

We Are Leading The Way

Inma are leading the way in the provision of turnkey integrated technology solutions that are digitizing the Saudi healthcare sector one healthcare facility at a time.

Track Record

Inma have transformed the healthcare system of a number of clients throughout Saudi Arabia including Saudi German Hospitals, Dr. Suliman Al Faqeeh Hospital, King Faisal Specialist Hospital & Research Centre and Saudi Aramco.

Service & Support No One Does It Better!

When it comes to after sales service and support Inma is the Gold Standard. Technology needs to be reliable 365 7/24 days a year and that is fundamental in the healthcare sector, that is why Inma guarantees complete responsiveness in terms of After Sales Service and Support and partners with you for the long term because your success is ours!

And, in a world where data is at our fingertips, we believe that Healthcare Service Providers deserve the same convenience, that's why Inma have built its response systems to be mobile friendly. we empower our healthcare workers with responsiveness simply at the touch of their mobile phone.

Our Team

Inspired by Tech, Powered by People

Inma is powered by a team of professionals that serve Saudi Arabia from its offices in Riyadh, and Khobar. Our highly experienced team of Information Technology experts are passionate about what they do. They have a deep understanding of their products and combine their local know-how with a broad network of international partners in order to deliver on their promises. Inma are 'Saudis serving Saudi'; Expert locals providing international standard products and services designed for world class standards of healthcare.

Committed To Sustainability

Sustainability is built into our business strategy.

We are unwavering in our commitment to our country and our society with community investment an integral part of our business priorities. We therefore dedicate part of our service to the Kingdom of Saudi Arabia, its citizens and residents, from both an economic and social aspect.

A Promising Saudi Work Environment

Inma provides a positive work culture based on the PERFORM values where our employees can reach their full potential.

We seek to attract, develop and retain the Kingdom's best local talent and encourage a gender equal and respectful workplace driven by performance and guided by the highest ethical business practices.

KSA Vision 2030

Inma aligns its strategy with the Saudi Vision 2030 and National Transformation Program 2020 (NTP) which underscores progressive healthcare for Saudis as a key area of focus.

Vision 2030 emphasises digitization of the sector as an important area set to improve the quality of healthcare services and facilities across the Kingdom of Saudi Arabia and this is what Inma is doing. We are digitizing the sector one healthcare facility at a time, providing advanced technology solutions and supporting the provision of elevated healthcare for all Saudi citizens. This in turn will positively impact the long-term socioeconomic progress of the Kingdom of Saudi Arabia.
